Frequently Asked Questions for the practical exercises

April 9, 2013

1 General stuff

1. **How are the practical exercises graded?**
   A solution shall be graded with 'sufficient' ('voldoende') or 'insufficient' ('onvol-doende'). You need to complete all exercises to fulfill the practical part of this course. You can only complete the course if you pass both the practical part and the exam.

2. **What should I hand in as an assignment solution?**
   You should send the source code (a compilable version) together with all additional files (Makefiles, input data files, etc.). You should also send a brief but comprehensive report following the structure described in the course manual. The lab assistant may require improvements on any of these two materials, in order for you to pass.

3. **Can I work in a group for solving an assignment?**
   In principle, NO. The "standard" given assignments are individual: each student has to solve three exercises individually. However, if a group of no more than 3 students want to solve a bigger project together, they should contact the lab assistant and discuss such an opportunity.

4. **Can I ask for help in solving an assignment?**
   YES. You can ask questions by e-mail, directly to the supervisor. If you have questions related to your code compilation or execution, also include the code together with the questions.
